COMMERCIAL								
1	ITB	5.0 (Email Support)	17 of 106	ITB	Facing issue for Registration process and DSC, hence request to improve/resolve the registration query as fast as possible over email/phone by your support team.	Refer Corrigendum#02		
TECHNICAL								
1	SOR	-	-	SOR	As per this tender contractor will get registered connection from owner, in project and O&M both location but in this tender there is no minimum amount is offered for short connection example - "2 mtrs connection or 3 mtr connection" or "O&M Area". Make sure contractor will at least get his site expenses for individual connection. There is 3-4 person team for single connection with tools and tackles and transportation cost also there.	Actual Installation Shall be paid as per respective SOR item.		
2	General	-	-	General	When we are working in O&M area there already main line was laid in that area and we have to install connection, maybe service line work is pending or already installed in that area. If Service line work is pending which is not in our scope then is there any time duration for this owner's end pending work, same as in project if no gas is available at the time of installation then how many days we will wait to complete our work.	The work front shall be allocated in charged areas		
3	General	-	-	General	Once we installed our scope work after RFC & NG conversion we have done our work completed on site after handover the RFC & JMR we are eligible for 90% claim and there is no waiting for Closure of work order.	Bidder understanding is correct.		
4	General	-	-	General	If no gas is available then we have to wait for gas and our established connection will be considered incomplete which will not be pending at the contractor's end. Is there any possibility for the contractor to close his work order without any deduction of the consumption value when he has met the work order target and has consumed 100% of the work order value as per site installation data or after the completion of the delivery period (if any extension period will be theirs), Some of its connections do not convert to gas RFC as the owner does not provide any gas within the specified period after get in installation report of connection.	Registration will provided to contractors in gasified areas.		
5	General	-	-	General	At least final minimum work order value for any contractor who will be engaged with Central UP Gas Limited for maximum productivity and stability for their own setup.	Tender condition shall prevail		
<p>Note:</p> <p>1. Bidder to submit reply to bidder's queries along with techno-commercial bid documents duly signed and stamped.</p> <p>2. All other terms and conditions shall remain unchanged as per tender document.</p>
